## 1. GENERAL DESCRIPTION

### 1.1 Description

15.6 inch is a Color Active Matrix Liquid Crystal Display Module composed of a TFT LCD panel and LED backlight system. The screen format is intended to support the 1920 x 1080 screen and 16.7 M colors.

### 1.2 Product Summary

The following items are summary on the table under Ta=25 °C condition:

| No. | Item                 | Specification  | Unit   |
|-----|----------------------|--|--------|
| 1   | Display Size         | 15.6" w  | Inch   |
| 2   | Pixel Number         | 1920 (H) x 3(RGB)x 1080 (V)                              | Pixels |
| 3   | Outline Dimension    | 382(W)×231.3(H)×11.35(D)<br>382(W)×231.3(H)×14.1 Max.(D) | mm     |
| 4   | Active Area          | 344.16 (W) x 193.59 (H)                                  | mm     |
| 5   | Pixel Pitch          | 0.17925 (W) x 0.17925 (H)                                | mm     |
| 6   | Display Colors       | 16.7M colors   |        |
| 7   | Pixel Arrangement    | RGB vertical stripe                                      | -      |
| 8   | Display Mode         | Normally Black   | -      |
| 9   | Electrical Interface | 2ch-LVDS   | -      |
| 10  | Surface Treatment    | Anti-glare   | -      |
| 11  | Brightness           | 350 (Typ.)   | cd/m2  |
| 12  | Contrast Ratio       | 800 (Typ.)   | -      |
| 13  | Power Supply Voltage | 5.0V for LCD – 12V for Backlight                         |        |
| 14  | Power Consumption    | Backlight System: 7.8W (Typ.)<br>Total: 11W (Typ.)       | W      |

## 2. ABSOLUTE MAXIMUM RATING

### 2.1 Electrical Absolute Rating

| Item                 | Symbol          | Values |     |     | Unit | Note |
|----------------------|-----------------|--------|-----|-----|------|------|
|                      |                 | Min    | Typ | Max |      |      |
| Power Supply Voltage | V <sub>CC</sub> | -0.3   | -   | 5.5 | V    | (1)  |
| Power Supply Voltage | V <sub>IN</sub> | -0.3   | -   | 4.0 | V    |      |

### 2.2 Backlight Converter

| Item              | Symbol         | Values |     |     | Unit | Note    |
|-------------------|----------------|--------|-----|-----|------|---------|
|                   |                | Min    | Typ | Max |      |         |
| Converter Voltage | V <sub>I</sub> | -0.3   | -   | 18  | V    | (1),(2) |
| Enable Voltage    | EN             | -      | -   | 5.5 | V    |         |
| Backlight Adjust  | Dimming        | -      | -   | 5.5 | V    |         |

Note (1) Permanent damage to the device may occur if maximum values are exceeded. Function operation should be restricted to the conditions described under Normal Operating Conditions.

Note (2) Specified values are for LED (Refer to 3.2 for further information).

### 2.3 Environment Absolute Rating

| Item                  | Symbol | Values |     |      | Unit | Note    |
|-----------------------|--------|--------|-----|------|------|---------|
|                       |        | Min    | Typ | Max. |      |         |
| Operating Temperature | Top    | -20    | -   | +70  | °C   | (1),(2) |
| Storage Temperature   | TST    | -30    | -   | +70  | °C   |         |

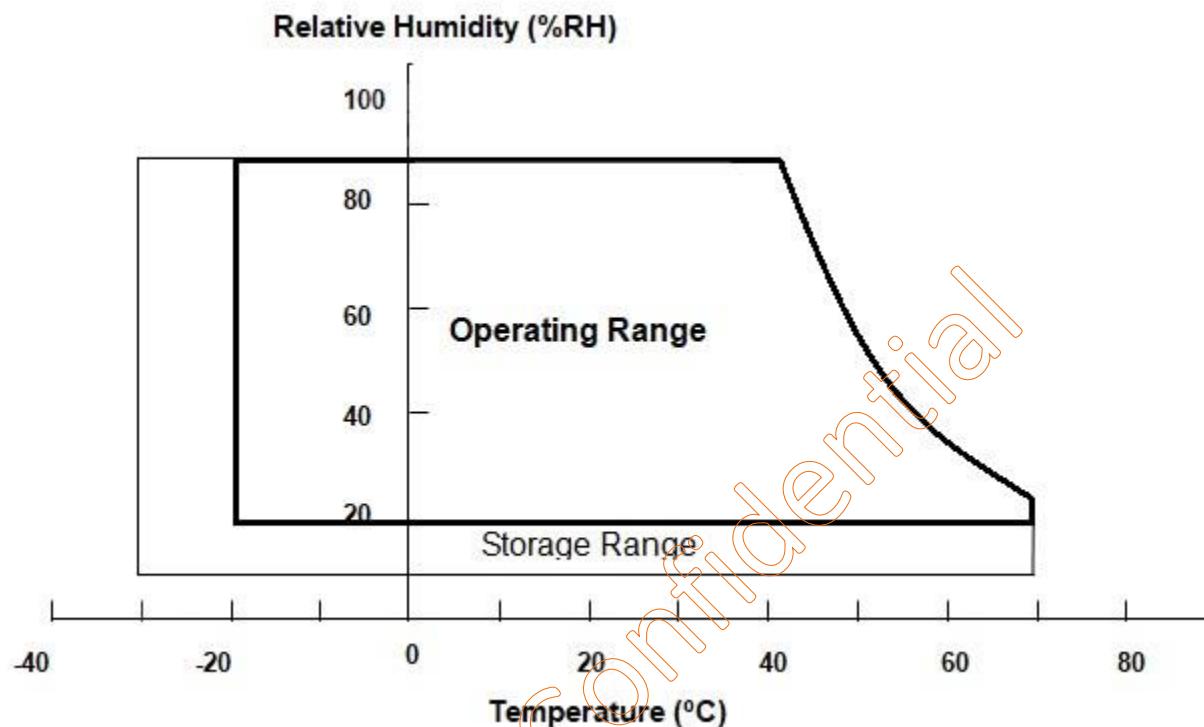

Note (1)

- (a) 90 %RH Max. ,
- (b) Wet-bulb temperature should be 39 °C Max.
- (c) No condensation.

Note (2) Panel surface temperature should be 0 °C min. and 65 °C max under Vcc=5.0V, fr =60Hz, typical LED string current, 25 °C ambient temperature, and no humidity control . Any condition of ambient operating temperature, the surface of active area should be keeping not higher than 70 °C.

Note (3) In the standard conditions, there is no function failure issue occurred. All the cosmetic specification is judged before test.

Note (4) Before cosmetic and function test, the product must have enough recovery time, at least 24 hours at room temperature.

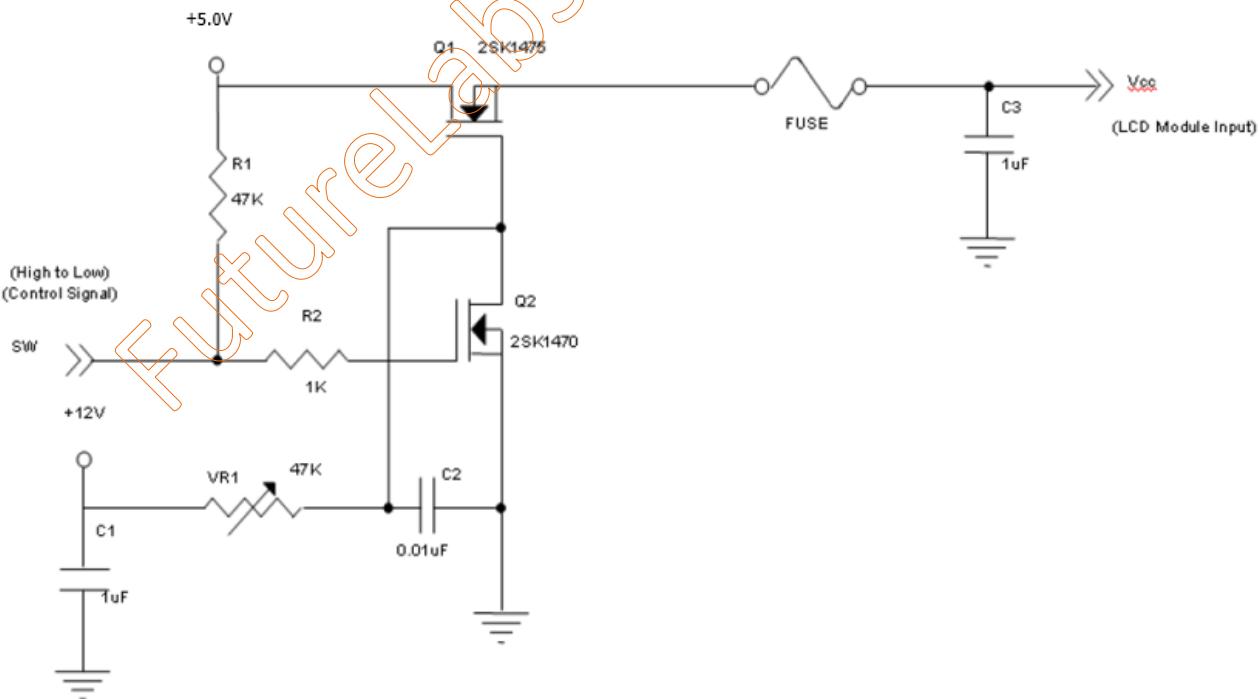

### 3. ELECTRICAL CHARACTERISTICS

#### 3.1 TFT LCD Module

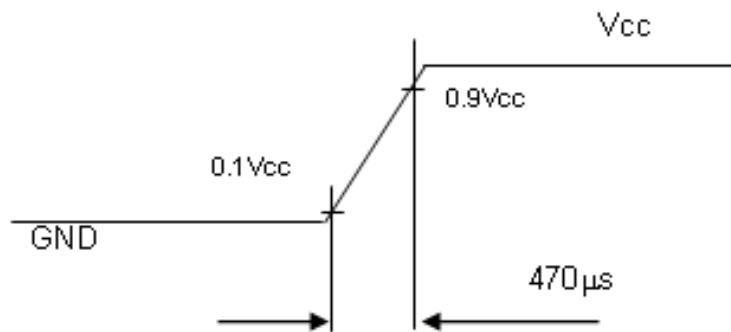

| Parameter                                       | Symbol              | Value           |      |      | Unit  | Note |
|---|---------------------|-----------------|------|------|-------|------|
|   |                     | Min.            | Typ. | Max. |       |      |
| Power Supply Voltage                            | V <sub>CC</sub>     | 4.5             | 5    | 5.5  | V     | -    |
| Ripple Voltage                                  | V <sub>RP</sub>     | -               | -    | 200  | mVp-p |      |
| Inrush Current                                  | I <sub>INRUSH</sub> | -               | -    | 3.0  | A     | (2)  |
| Power Supply Current                            | I <sub>CC</sub>     | -               | 0.64 | 0.73 | A     | (3)a |
|   |                     | -               | 0.38 | 0.45 | A     | (3)b |
| LVDS differential input voltage                 | V <sub>ID</sub>     | 100             | -    | 600  | mV    | (4)  |
| LVDS common input voltage                       | V <sub>IC</sub>     | 1.0             | 1.2  | 1.4  | V     | (4)  |
| Differential Input Voltage<br>for LVDS Receiver | "H" Level           | V <sub>IH</sub> | -    | 100  | mV    | -    |
|   | "L" Level           | V <sub>IL</sub> | -100 | -    | mV    | -    |
| Terminating Resistor                            | R <sub>T</sub>      | -               | 100  | -    | Ohm   | -    |

Note (1) The module should be always operated within above ranges.

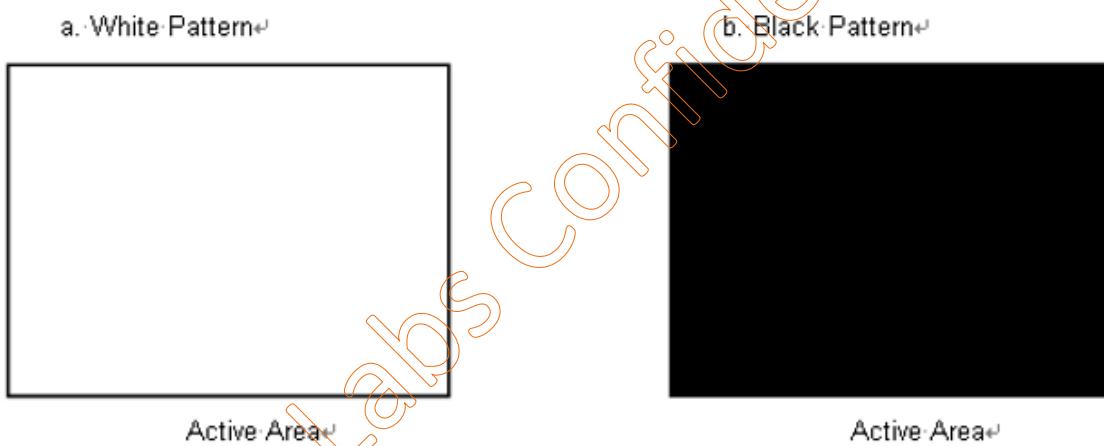

Note (2) Measurement Conditions:

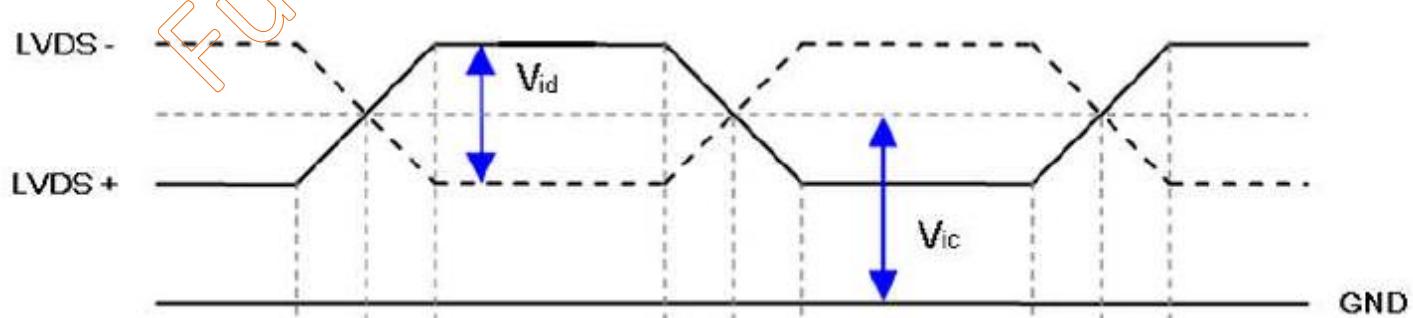

**V<sub>CC</sub> rising time is 470μs**

Note (3) The specified power supply current is under the conditions at  $V_{DD} = 5.0V$ ,  $T_a = 25 \pm 2 ^\circ C$ , DC Current and  $f_V = 60$  Hz, whereas a power dissipation check pattern below is displayed.

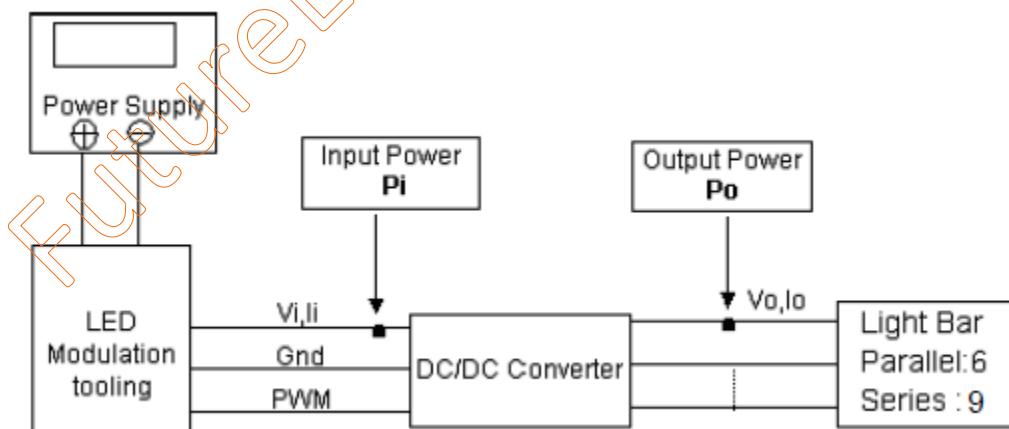

Note (4) VID waveform condition

### 3.2 Backlight Unit

| Parameter                      | Symbol         | Min.               | Type | Max. | Unit. | Note                                 |

|                                | Backlight off  |                    | 0    | -    | 0.3   | V                                    |
| PWM Control Level              | PWM High Level | Dimming<br>(E_PWM) | 2.0  | -    | 5.0   |                                      |
|                                | PWM Low Level  |                    | 0    | -    | 0.15  | V                                    |
| PWM Noise Range                | VNoise         | -                  | -    | 0.1  | V     |                                      |
| PWM Control Frequency          | fPWM           | 190                | 200  | 20k  | Hz    | (2)                                  |
| PWM Dimming Control Duty Ratio | -              | 5                  | -    | 100  | %     | (2), @<br>190Hz < fPWM < 1kHz        |
|                                |                | 20                 | -    | 100  | %     | (2), @<br>1kHz ≤ fPWM < 20kHz        |
| LED Life Time                  | LLED           | 50,000             |      |      | Hrs   | (3)                                  |

Note (1) LED current is measured by utilizing a high frequency current meter as shown below:

Note (2) The lifetime of LED is estimated data and defined as the time when it continues to operate under the conditions at  $T_a = 25 \pm 2^{\circ}\text{C}$  and Duty 100% until the brightness becomes  $\leq 50\%$  of its original value. Operating LED at high temperature condition will reduce life time and lead to color shift.

Note (3) At 190 ~1kHz PWM control frequency, duty ratio range is restricted from 5% to 100%. 1K ~20kHz PWM control frequency, duty ratio range is restricted from 20% to 100%. If PWM control frequency is applied in the range from 1KHz to 20KHZ, The “non-linear” phenomenon on the Backlight Unit may be found. So It's a suggestion that PWM control frequency should be less than 1Khz.

|                         | Spread spectrum modulation frequency | $F_{SSM}$        |                |         | 200            | KHz  |                         |
| Vertical Display Term   | Frame Rate                           | $F_r$            | (50)           | 60      | (60)           | Hz   | $T_v = T_{vd} + T_{vb}$ |
|                         | Total                                | $T_v$            | (1090)         | (1110)  | (1130)         | Th   | -                       |
|                         | Active Display                       | $T_{vd}$         | 1080           | 1080    | 1080           | Th   | -                       |
|                         | Blank                                | $T_{vb}$         | $T_v - T_{vd}$ | (30)    | $T_v - T_{vd}$ | Th   | -                       |
| Horizontal Display Term | Total                                | $T_h$            | (1050)         | (1065)  | (1075)         | Tc   | $T_h = T_{hd} + T_{hb}$ |
|                         | Active Display                       | $T_{hd}$         | 960            | 960     | 960            | Tc   | -                       |
|                         | Blank                                | $T_{hb}$         | $T_h - T_{hd}$ | (105)   | $T_h - T_{hd}$ | Tc   | -                       |

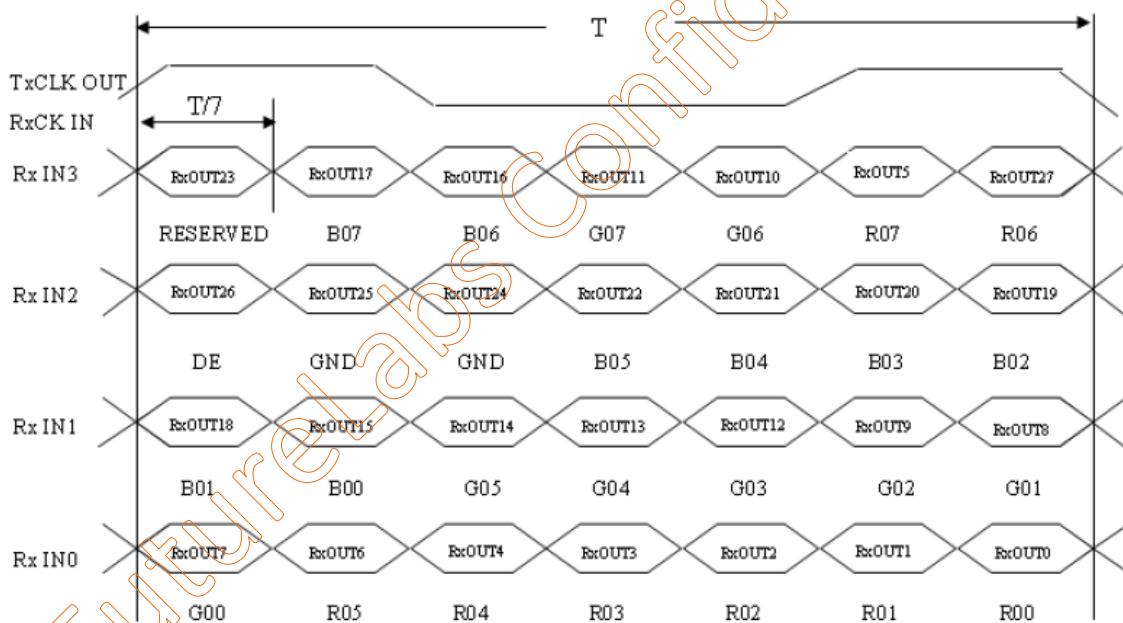

Note (1) Because this module is operated by DE only mode, Hsync and Vsync input signals should be set to low logic level or ground. Otherwise, this module would operate abnormally.

Note (2) The  $T_v$  ( $T_{vd}+T_{vb}$ ) must be integer, otherwise, the module would operate abnormally.

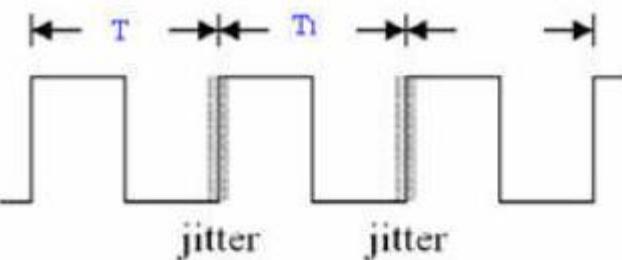

### INPUT SIGNAL TIMING DIAGRAM

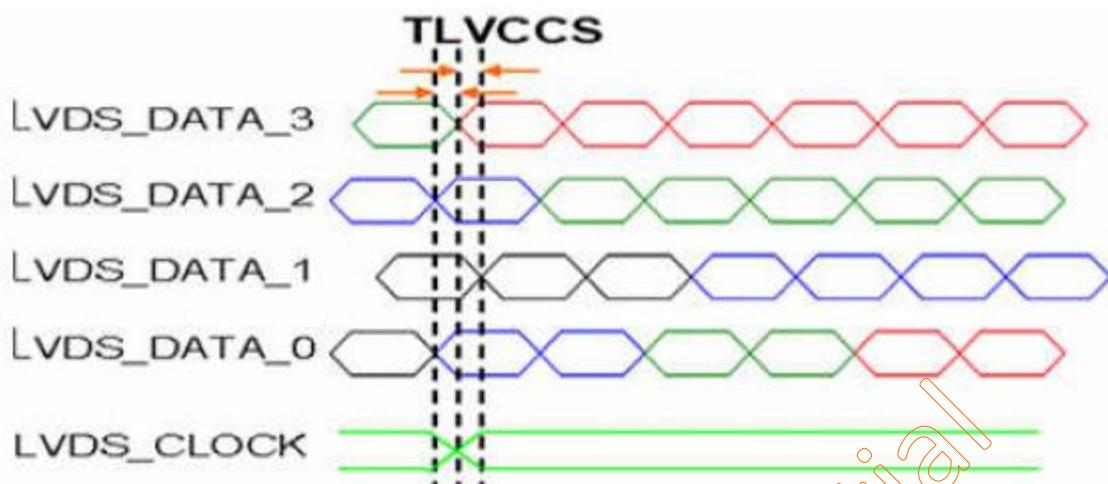

### TIMING DIAGRAM of LVDS

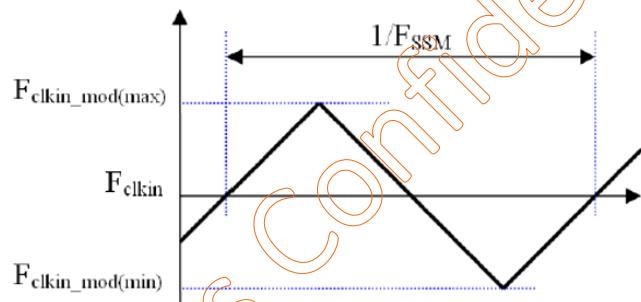

Note (3) The input clock cycle-to-cycle jitter is defined as below figures.  $Trcl = |T_1 - T_2|$

Note (4) Input Clock to data skew is defined as below figures.

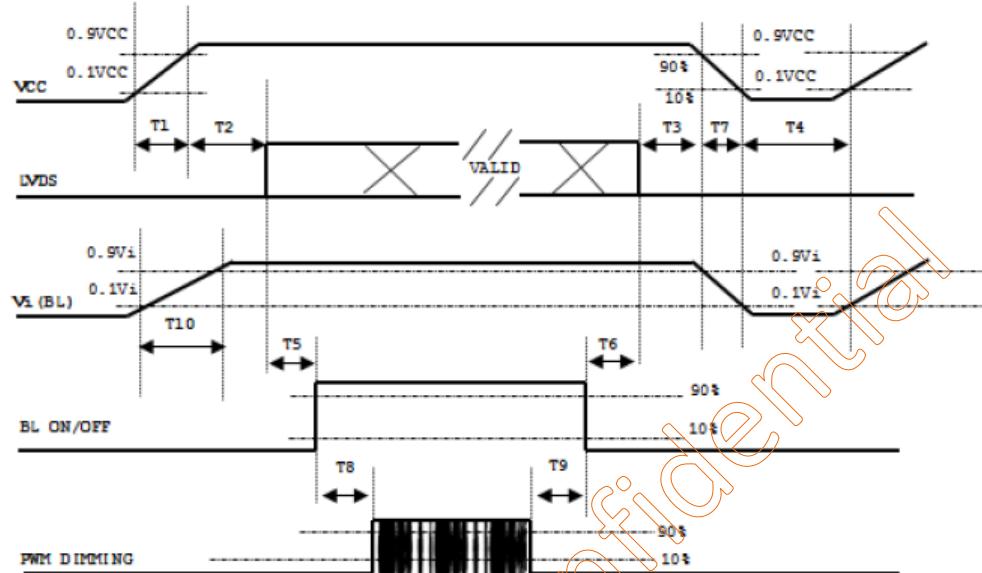

Note (5) The SSCG (Spread spectrum clock generator) is defined as below figures.

## 4.2 Power On/Off Sequence

To prevent a latch-up or DC operation of LCD assembly, the power on/off sequence should be as the diagram below.

Timing specifications:

| Parameter | Value |     |     | Units |
|-----------|-------|-----|-----|-------|
|           | Min   | Typ | Max |       |
| T1        | 0.5   |     | 10  | ms    |
| T2        | 0     | -   | 50  | s     |
| T3        | 0     | -   | 50  | ms    |
| T4        | 500   | -   | -   | ms    |
| T5        | 450   | -   | -   | ms    |
| T6        | 200   | -   | -   | ms    |
| T7        | 10    | -   | 100 | ms    |
| T8        | 10    | -   | -   | ms    |
| T9        | 10    | -   | -   | ms    |
| T10       | 20    | -   | 50  | ms    |

Note:

- (1) The supply voltage of the external system for the module input should be the same as the definition of Vcc.
- (2) When the backlight turns on before the LCD operation of the LCD turns off, the display may momentarily become abnormal screen.
- (3) In case of VCC = off level, please keep the level of input signals on the low or keep a high impedance.

- 
- (4) T4 should be measured after the module has been fully discharged between power off and on period.
  - (5) Interface signal shall not be kept at high impedance when the power is on.
  - (6) FL won't take any responsibility for the products which are damaged by the customers not following the Power Sequence.
  - (7) There might be slight electronic noise when LCD is turned off (even backlight unit is also off). To avoid this symptom, we suggest "Vcc falling timing" to follow "T7 spec".

|                           | White      |   | 0.313 |               |               | -                 |        |  |
|                           |            |   | 0.329 |               |               | -                 |        |  |
| Viewing Angle             | Horizontal | CR=10   | 85    | 89            | -             | Deg.              | (1)(5) |  |
|                           |            |   | 85    | 89            | -             |                   |        |  |
|                           | Vertical   |   | 85    | 89            | -             |                   |        |  |
|                           |            |   | 85    | 89            | -             |                   |        |  |

The following optical specifications shall be measured in a darkroom or equivalent state (ambient luminance <2 lux, and at room temperature).

The room temperature is 25°C±2°C.

Note 1: Definition of Viewing Angle

Viewing angle is the angle at which the contrast ratio is greater than 10. The viewing angles are determined for the horizontal or the vertical clock direction with respect to the optical axis which is normal to the LCD surface

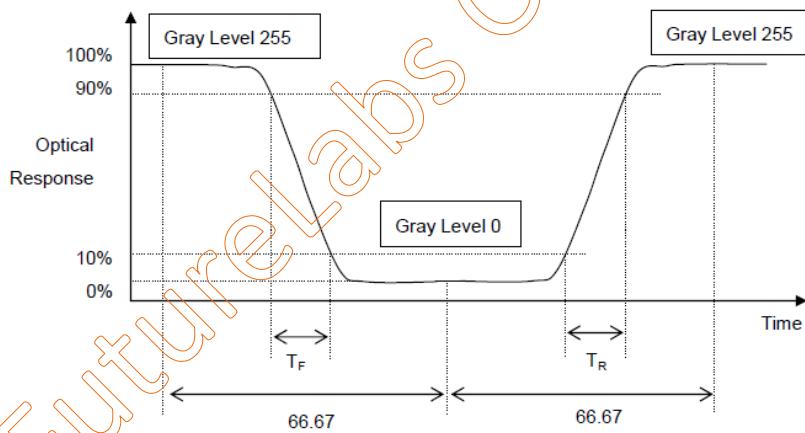

Note 2: Definition of Contrast Ratio (CR)

Measure the viewing angle of  $\Theta = 0$  and at the center of the LCD surface. Luminance with all pixels in white state divide by Luminance with all pixels in Black state

Note 3: Definition of Response Time:

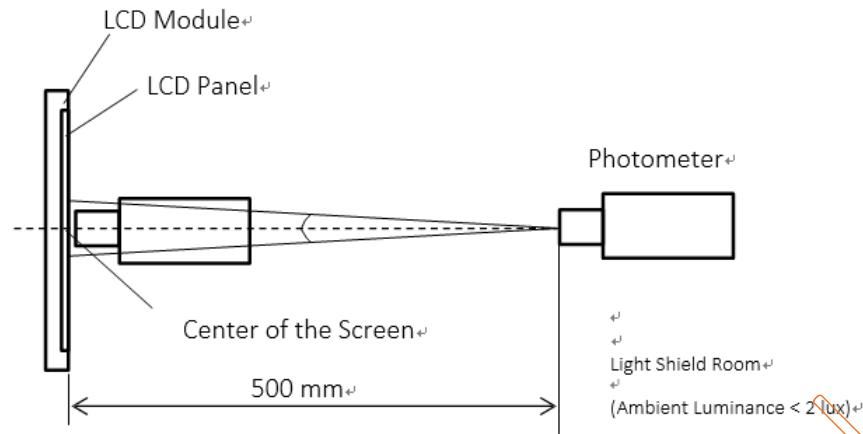

The response time is set initially by defining the “Rising Time (TR)” and the “Falling Time (TF)” respectively. Please refer the figure to the followings:

Note 4: Definition of Brightness (L)

Measure the center area of the panel and the viewing angle of the  $\theta_x=\theta_y=0^\circ$

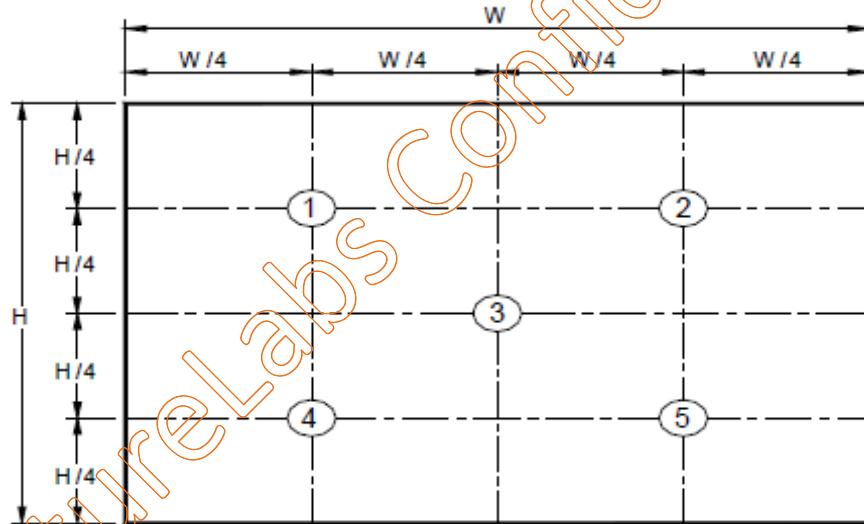

Note 5: The method of optical measurement:

Note 6: Definition of White Variation ( $\delta W$ ):

Measure the luminance of gray level 255 at 5 points

$$\delta W = (\text{Maximum } [L(1), L(2), L(3), L(4), L(5)] / \text{Minimum } [L(1), L(2), L(3), L(4), L(5)]) \times 100\%$$

## 8. Touch Screen specification

### 8.1 Environmental Specification

| Specification         | Value        |
|-----------------------|--------------|
| Operating Temperature | -20°C ~ 70°C |
| Storage Temperature   | -30°C ~ 80°C |
| Operating Humidity    | 20% ~ 90%RH  |
| Storage Humidity      | 10% ~ 90%RH  |

### 8.2 Mechanical Specification

| Specification                 | Value                            |
|-------------------------------|----------------------------------|
| Operating Life (Finger input) | $10^7$ times                     |
| Light Transmittance           | 85% Min. (JIS K-7105) with glass |
| Surface hardness              | 6H                               |
| FPC Peeling Force             | 5N Max                           |

### 8.3 USB Type Controller

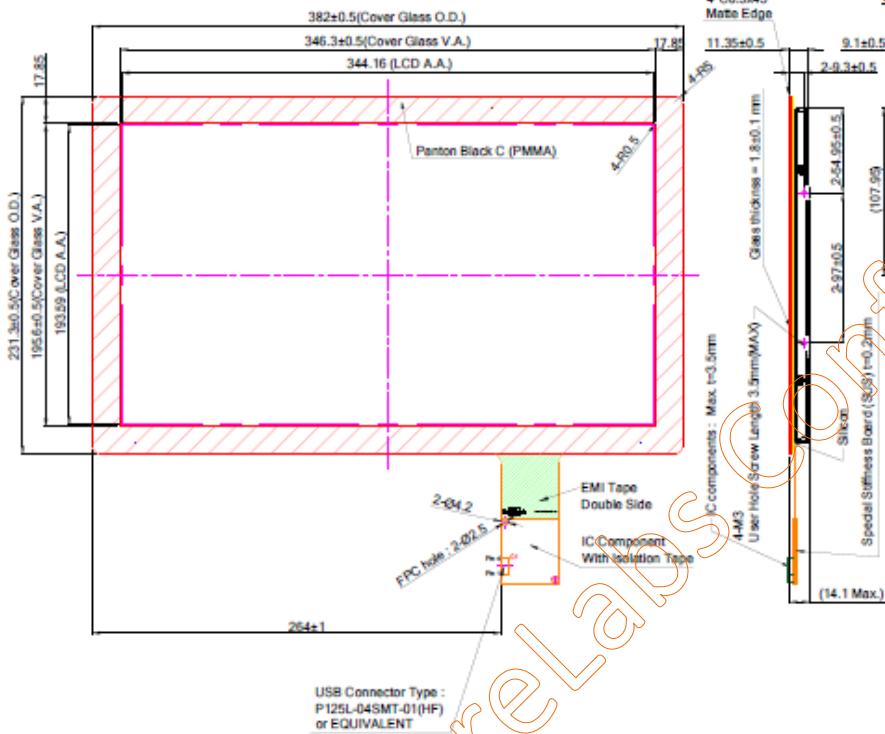

| Parameters                      | Features   |
|---------------------------------|--|
| Circuit Board Dimension         | Refer to drawings  |
| Channels of Panel               | Based on Sensor Design   |
| Input Voltage                   | USB: 5VTyp.  |
| Linearity(Note 1)               | Single Line drawing accuracy : Up to 1pt +/- 1mm offset /10mm<br>Single Touch (point) accuracy : Up to 1pt +/- 1mm |
| Interface                       | USB: 2.0(Below) Full Speed   |
| Resolution                      | 16384×16384 resolution   |
| Power consumption(mA)           | Active Mode: <110mA<br>Idle Mode : <55mA<br>Sleep Mode :<10mA<br>(Operation Mode : Active Mode only)               |
| Report rate(points/sec) Note(2) | > 100 Hz   |
| Response time                   | Average < 25ms   |

Note (1): Depending by Sensor design and other parameters, Refer to Windows 8 Logo regulation if need to follow min spec

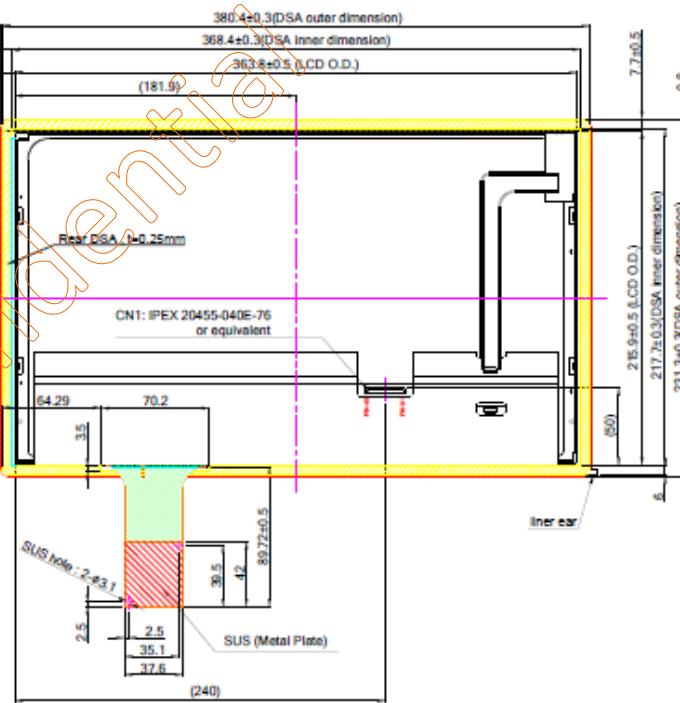

Note (2): Report rate will vary by channel number, cover thickness, number of fingers and other parameters

## 9. DIMENSION AND DRAWING

Front VIEW

Back VIEW

- Note:
1. SIDE MOUNT HOLE ROTATIONAL TORQUE MAX IS 6kgf-cm
  2. Tolerance: ±0.5mm
  3. Touch Surface Hardness: 7H (C.S. Glass)
  4. Touch Transmittance: >85% (JIS-K7105)
  5. Touch Surface Treatment: None
  6. If customer put a front cover all around need use at least 2mm thick gasket between touch and metal frame
  7. USB max ripple acceptable is 50mV, in other case touch will not work correctly
  8. Referring to the integration guide to avoid any integration noise issue
  9. LCD model : FLC-156MML220001#00
  10. Touch model : RTPC156W-0001
  11. Assemble Solution: DSA

## 10. PRECAUTION AND PRODUCT HANDLING

- Do not apply the external force such as bending or twisting to the LCD panel and backlight during assembly.
- Do not insert and plug out the input connector while the LCD panel is operating.
- Do not take apart the panel or frame from LCD module assembly or insert anything into the backlight unit.
- Do not keep the same pattern in a long period of time, it may cause image sticking on LCD panel. Can use shuffle content periodically if fixed pattern is displayed on the screen.
- Do not touch the display area with bare hands, this will stain the display area.
- Pay attention to handle lead wire of backlight, that is not tugged in connect with LED driver.
- Do not change variable resistance settings in LCD panel, it may cause not satisfy of LCD characteristics specification.
- The surface of LCD panel's polarizer is very soft and easily scratched, please use a very soft dry cloth without chemicals for cleaning.
- To avoid the static electricity to damage the CMOS LSI, the operator should be grounded when in contact with the LCD panel, and also to all electrical equipment.
- Need to follow the correct power frequency when LCD panel is connecting and operating, this can avoid damage to CMOS LSI during latch-up.
- Need to store the LCD panel indoor without the exposure of sunlight where the temperature is  $25^{\circ}\text{C} \pm 5^{\circ}\text{C}$  and the humidity is below 60% RH.
